Telecom Expense Management Review

We'll analyze your environment and offer you confidential, sound advice on how you can improve one or more of these areas

TnT Partners at the ITFMA

TnT Partners President Michael Bodetti presented at the annual IT Financial Management Association Conference on March 17-19, 2004.

Held this year in Saint Petersburg, FL, the conference attendees were primarily IT Budget Managers, Senior Analysts and Controllers from Fortune 500 companies.

Michael presented Telecom Expense Management, a presentation on how best to internally contain telecom costs and maximize carrier credits.

On the second day, he presented Outsourcing your Telecom Expense Management, which discussed the benefits of having TnT Partners manage your day-to-day telecom bill processing and payment.

TnT Partners hosted a beautiful Hawaiian luau with a steel drum player, tropical drinks and roasted whole pig! It certainly was a highlight of the conference.

Managing the Wireless Nightmare

We know what you're up against...hundreds (even thousands) of wireless users in your company looking to your department for procurement, technical support, even reimbursement.

Your management is looking to you to handle the inventory, calling plans and chargeback.

It's more than a fulltime job for one (or more) employees and there is no headcount resourced. Sound familiar?

Maybe it's time to outsource your wireless management.

With TnT Partners, you can rest assured knowing that your company has the best contract, equipment and calling plans for their dollar.

We will manage your wireless vendors, process and coordinate payments and even provide end-user support.

With nationwide wireless costs now exceeding landline long distance costs* you can't let another year go unmanaged.
